

Practical Home Science Course

Fourth through eighth grade students can register today and join us for this HSU Spark Scholars program called Practical Home Science course. This 9-week course is held on Thursdays from October 28th - Dec. 16th from 3:00pm-5pm at the HSU Innovation Institute North campus.

Throughout the course, students will be prototyping and building three main home science projects: water tower modeling, greenhouse scale modeling and building a telescope. These mini-projects will teach students to build some of the simple but useful household items that can be created from objects at the local hardware store and around the house, combined with a knowledge of STEM skills.

All participants must register here:
